Connecting the Coast

CTC wildlife corridors identify conservation targets for the protection of a connected network of habitats for wildlife to persist and thrive in the context of a rapidly developing landscape. The network is made of wildlife corridors that connect a series of prioritized habitat blocks.

CTC prioritized habitat blocks represent conservation focus areas for wildlife habitat based on regional conservation plans and state wildlife action plans for the study area.

Base Features (transportation, political and hydrographic) were automated from the USGS Digital Line Graph data, 1:24,000, and archived in the GRANIT database at Complex Systems Research Center, Institute for the study of Earth, Oceans and Space, University of New Hampshire, Durham, NH; 1992-1999. The roads have been updated by Rockingham Planning Commission and by NH Dept. of Transportation through ongoing efforts.

Digital Data in NH GRANIT represent the efforts of the contributing agencies to record information from the cited source materials. Complex Systems Research Center (CSRC), under contract to the Office of State Planning (OSP), and in consultation with cooperating agencies, maintains a continuing program to identify and correct errors in these data. OSP, CSRC, and the cooperating agencies make no claim as to the validity or reliability or to any implied uses of these data.
